Main job

Main Job

stage_product

Job entry details for this transformation:

Name of job entry: stage_product

Transformation specification | Advanced | Logging settings | Argument | Parameters

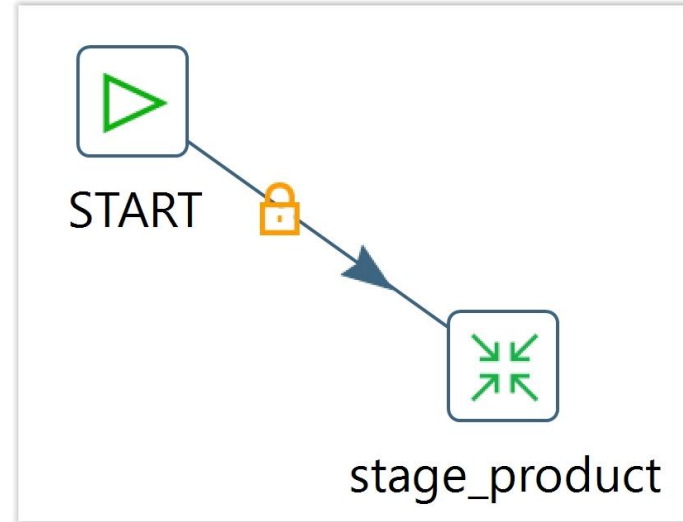

☒ Transformation filename: \$(project_folder)\dim_product\stage_product.ktr

☐ Specify by name and directory

☐ Specify by reference

New transformation

Help OK Cancel

dim_product

Job entry details for this transformation:

Name of job entry: **dim_product**

Transformation specification | Advanced | Logging settings | Argument | Parameters

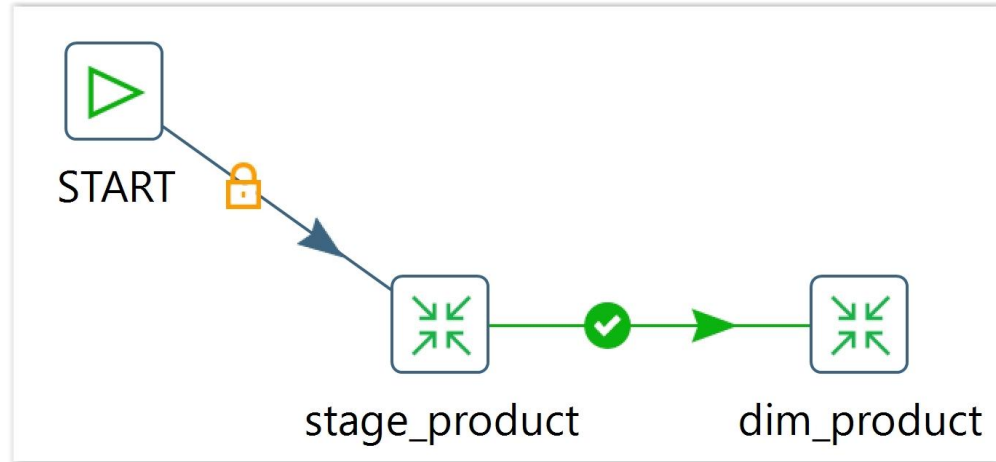

☒ Transformation filename: **\$(project_folder)\dim_product\dim_product.ktr**

☐ Specify by name and directory

☐ Specify by reference

New transformation

Help OK Cancel

stage_sales

Job entry details for this transformation:

Name of job entry: stage_sales

Transformation specification | Advanced | Logging settings | Argument | Parameters

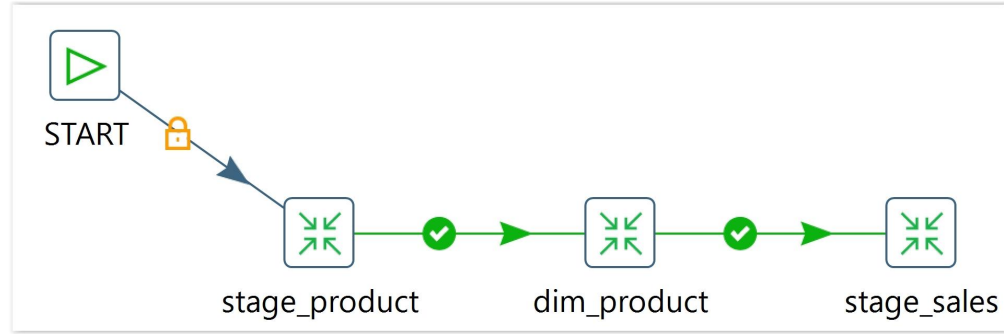

☒ Transformation filename: \$(project_folder)\fact_sales\stage_sales.ktr

☐ Specify by name and directory

☐ Specify by reference

New transformation

Help OK Cancel

fact_sales

Job entry details for this transformation:

Name of job entry: **fact_sales**

Transformation specification | Advanced | Logging settings | Argument | Parameters

☒ Transformation filename: **\$(project_folder)\fact_sales\fact_sales.ktr**

☐ Specify by name and directory

☐ Specify by reference

New transformation

Help OK Cancel

Before you run Main job

- Before you create and run a job to streamline the dimension, recall that, running step 2.2 twice created duplicate entries
- In practice, we make sure that, we never process same pos files twice.
 - How? By moving the processed files to an archive directory.
 - More on this topic : <https://wiki.pentaho.com/display/EAI/Move+files>

For now, Truncate the fact_sales manually (using pgadmin / spoon database explorer), before you run the job.

Run main_job.kjb

Welcome! main_job

100%

```
graph LR; START[START] --> stage_product[stage_product]; stage_product --> dim_product[dim_product]; dim_product --> stage_sales[stage_sales]; stage_sales --> fact_sales[fact_sales];
```

Execution Results

History | Logging | Job metrics | Metrics

| Job / Job Entry | Comment | Result | Reason | Filename | Nr | Log date |
|-----------------|------------------------|---------|-----------------------------|-----------------------------|----|-------------------|
